1942

**BERRY and VEGETABLE PLANTS
SEED**

Farms Barnsboro.

P. O. SEWELL New Jersey

TO OUR FRIENDS AND CUSTOMERS

We are glad to present our 28th annual catalog in its usual modest and sincere form. The many patrons who have been with us since the early days of our business prove that reliable facts followed by satisfaction is our best advertisement.

We take this means of thanking all who have patronized us in the past and assure you of the same satisfaction in the future.

Very sincerely yours,

C. E. Field Plant Farm

INSTRUCTIONS

TIME TO ORDER —As soon as possible after receiving this catalog. That is particularly so with berry plants. We can reserve the varieties you want and ship as early in the spring as it is possible for you to prepare the land for them. This is the first important step toward a successful berry patch. When planting in the early spring you are certain of getting a good stand without watering and nursing them along, which is often required later in the season when it becomes hot and dry.

ALL OUR PLANTS ARE FRESHLY DUG; packed in light ventilated crates with plenty of damp moss and shipped promptly, guaranteed to reach you in good condition. Should they arrive in poor condition which might happen through delay in transit or some cause beyond our control, accept the plants and have your Express Agent or Postman make note of same. Advise us at once and we will make good all just claims when made on receipt of goods.

GUARANTEE

We guarantee our stock to be true to name and free from disease. We use every precaution to keep it so and believe we have been able to do it almost one hundred percent in the twenty eight years that we have been in business. Should any prove otherwise we will replace them on proper proof but in no case will we be responsible for any greater amount than the purchase price of stock.

PAYMENT should be made to the C. E. Field Plant Farm by Money Order Bank Draft or personal check. However, we will reserve your order for a deposit of one fourth of total amount. The balance can be paid before shipment or will ship with balance. C.O.D.

STATE OF NEW JERSEY DEPARTMENT OF AGRICULTURE TRENTON

No. 516

TRENTON, N. J. January 6th 1942

THIS IS TO CERTIFY that we have this fifth day of January, 1942 in accordance with the provisions of Title 4 Chapter 7 of the Revised Statutes of the State of New Jersey, caused to be inspected by duly appointed inspector the general nursery stock growing in the C. E. Field Estate nursery C. E. Field Estate proprietor at BARNSBORO in Gloucester County, New Jersey, and have found same apparently free from San Jose scale, and other dangerously injurious insect pest and dangerously destructive plant diseases.

This certificate expires Sept. 1, 1942 and covers only stock actually in the nurseries when examined

HARRY B. WEISS Chief Bureau of Plant Industry. W. H. ALLEN, Secretary of Agriculture

TAKE NOTICE

Why you should use our New Jersey grown Berry Plants

As we all know the most important factor in growing Strawberries is to begin by using good strong healthy plants. Our plants are grown under ideal conditions in a locality where few Strawberries are grown, avoiding any chance whatever of getting the Red Stele disease, which has become so alarming and threatening to the strawberry industry, especially in some areas of other states where they have been grown extensively.

The Red Stele disease is rather hard to detect early in the season. Should the plants that you set have a slight infection, it may not be noticable until the following year when you are expecting a crop of fruit and find that your plant beds are dying out from this disease.

To avoid any chance from this malady, use plants from some section of the country where berries have not been grown extensively and no trace of the dreaded disease has been found. This disease is carried on the plant roots or by infested soil. If your land is once infested it will be a number of years before you can grow berries on it again.

A FIELD OF OUR STRAWBERRY PLANTS

Varieties of STRAWBERRIES

PATHFINDER. per. A new variety, originating at the New Jersey Agriculture College. The result of a cross between the Premier and Aberdeen very vigorous in plant growth, making a sufficient number of plants for a good bed but much larger and heavier foliage than either of its original parent plants, also very resistant to plant diseases. Will produce a large crop of fruit, medium to large in size, uniformly smooth and regular in shape, good color, moderately firm and a good flavor, a proven new variety.

BLAKEMORE. Per. Early—A good early variety that has been thoroughly tested. It is a vigorous grower, making plenty of good strong plants. Berries larger than the average extra early variety, bright red in color, good flavor and firm flesh, making it a good commercial berry.

PREMIER. per. (or Howard No. 17) Early—This is one variety sold under either name. Size medium to large, good color and a firm berry, plants very vigorous making good beds and more resietant to frost than other varieties, you can not go wrong on them.

SUCCESS. Per Medium Early—An old reliable that we still recommend for the home garden. It makes good strong plants and plenty of them to form a sufficient bed for a good crop of fruit, the fruit is extra large, excellent flavor and has a long picking season, in fact all any one could desire in a home berry or near by market, it is not a distant shipper.

STRAWBERRIES PLANTS

FAIRFAX per.early

The most wonderful introduction of strawberries in recent years. It makes a moderate number of exceptionally strong heavily rooted, large crown plants, very productive of big beautiful berries.

The fruit is the best of flavor, rich red in color with bright green caps. It starts picking a few days later than Premier. It is exceptionally firm and stands distant shipping also desirable for home garden or road size market as it has the quality and good appearance.

CATSKILL per.

A new midseason variety, making plenty of good strong plants, a heavy producer of large berries of good quality, light red in color, with large green caps making it very attractive and sells well on the market.

FAIRFAX PLANTS

DORSETT per.

This new berry has already become a favorite with many growers. It ripens with premier, makes a vigorous growth of foliage, not as large a plant as the Fairfax but makes them more freely, often requiring thinning and spacing.

The fruit is large, light red in color good flavor and firm texture making it a good all around variety.

ABERDEEN Per.—Under favorable conditions outyields any other. The fruit averages large throughout the season, a bright shiny red in color, uniform in size and shape and has a beautiful green calix that adds much to its appearance.

CHESAPEAKE. Per Late—The choice of berries with many growers, but it has its fault, unless planted on extra good land and good attention is given it, it does not make a sufficient bed to produce a good crop of berries. The fruit is large and the best of quality, but must be planted on good rich loomy soil for the best results.

GANDY. Per. Late—The latest of all summer varieties, plants strong and vigorous, berries extremely large and extra firm and good color. Not considered the best table berry but being extra fancy and a good shipper it is a profitable commercial variety.

LUPTON. Per. Late—This berry originated in South Jersey and has become very popular, it makes extra large plants and a sufficient number to form a good fruiting bed. It is a handsome berry of excellent quality and we can recommend it, either for commercial planting or the home garden.

BIG JOE. Per Mid-Season—An extra large berry, coloring all over alike, the texture is one of the best, giving it excellent shipping qualities, making it a favorite with many growers.

WM. BELT. Per. Midseason—The best yet of its season. Plants vigorous and prolific, fruit, medium to large, the best of all flavors, most perfect in shape, brilliant glossy red and ripens all over alike.

NORTH STAR

A wonderful new variety, originated by the Department of Agriculture. This variety makes a small number of plants and heavy foliage which protects the blossoms from frost, making it desirable in localities where late frosts are concerned. The berries are extra large, bright red in color, of good flavor and hold up well.

Bunch of MASTODON Plants

Everbearing Varieties

The everbearing has many advantages over the summer varieties. If planted in the spring they will produce a crop of fruit in the late summer and fall of the same season they are planted. The buds should be removed until the last of July so they will become thoroughly rooted before fruiting. They will produce fruit until freezing weather, then you will have your fruiting bed for another year.

Another great advantage is (particularly in localities where late frosts often catch the blossoms and destroy the crop of other varieties.) The everbearing are so persistent in blooming, they will continue to bloom until they do produce a crop, while summer varieties are through for that season if the bloom has been frozen.

MASTODON

We believe this variety to still be the leader in everbearing strawberries. Very vigorous in plant growth making a limited supply of exceptionally large plants. The fruit is large, of good quality and attractive in appearance.

The one variety that will grow most anywhere.

GEM

This everbearing variety became very popular. The plant is very vigorous making medium size plants and plenty of them.

It is very productive, fruit medium to large, light red in color and very firm in texture holding up well.

We believe it will produce more fruit in the fall than any other everbearer variety we have tried.

WAYZATA

One of the newer varieties in everbearing. It has already made great records in some sections of the country. It makes exceptionally strong vigorous plants, but very few new runner plants making it ideal to grow in the hill system. The berries are large, bright red in color and the very best of flavor.

We dig and ship berry plants from Nov. 1st. until May 20th.

VEGETABLE PLANTS

CABBAGE

Yellow Resistant Strains

We are offering the best that can be produced in cabbage plants by using seed of the yellow resistant strains. The disease is spreading continuously over the country, in fact so severe in some sections that cabbage growing had been discontinued, until intensive investigations had revealed the fact that this disease could be controlled. To day they are growing the finest kind of cabbage crops on the same land, by using this seed from disease resistant strains.

For best results, use our plants which are grown from seed of the yellow resistant strains; Jersey Queen, Marston Market, Alhead Select, Wisconsin Ballhead, Wisconsin Alseason and Red Hollander. We also will grow Golden Acre, Glory, Surehead, Flatdutch and Drumhead Savoy.

Early Cabbage Plants

The first lot of cabbage plants we have to offer are the drilled plants from the cold frames, which are usually ready by the middle of April. We will have the early varieties ready at this time.

Field Grown Cabbage Plants

Cabbage seed is sown in the open field in the month of March. These plants will be ready to ship early in May. We make continuous sowings to have a good supply of plants on through the season. You will notice a much lower price on the field grown plants, as the cost of producing them is much less when grown in the open field.

TOMATO

Early Tomato Plants

Our first supply of tomato plants are the transplanted plants from the cold frames, which are ready after May first. The next to be ready are the drilled plants from the cold frames. They are ready about the 15th or 20th of May, at a much lower rate. We will have the following varieties in the cold frames John Baer, Marglobe, Stocksdale, and Rutgers.

Field Grown Tomato Plants

The main crop of tomato plants is sown in the open field. They are drilled thin so as to make good strong plants about eight to ten inches high, they will be ready the first week of June. We make several sowings to keep a supply on hand throughout the entire season. You will notice that the price is much lower on these plants owing to the lower cost of producing them in the open field.

We will grow the following varieties. John Paer, Marglobe, Rutgers, Stone Scarlet Topper, Stokesdale and Small Yellow Egg.

Broccoli, Lettuce, Brussel Sprouts and Beet Plants

Our first supply of these vegetable plants are drilled plants from the cold frames, ready about the middle of April. After the middle of May we can fill orders from the field grown plants at a lower rate. Will grow the following varieties. Lettuce—Big Boston, Romain, New York and Iceburg. Beets—Early Egyptian and Detroit Dark Red. Brussel Sprouts—Long Island Improved Broccoli—Calabrese Improved.

CAULIFLOWER

The first lot we will have to offer will be the drilled plants from the cold frames. They are ready about the same time as cabbage plants. April 20th. We will have field grown plants any time after the middle of May. We will grow Early Snow Ball and Dwarf Erfert.

CELERY

Our celery plants are grown in the open field only. We are usually prepared to fill orders any time after the middle of June. Will grow the following varieties: Golden Self Blanching, White Plum, Winter Queen, Giant Pascal and Easy Blanching.

SWEET POTATO

We will have a good supply of sweet potato plants and will be prepared to fill orders any time after the 1st of May. Will grow the following varieties: Up River and Kelley, these two varieties are yellow, we also have the Jersey Red and Yams

EGG PLANT

Egg Plants are more difficult to grow than most other plants, it requires much more warmth and extra care to grow them, in fact they should not be set in the open field until the weather becomes quite pleasant. Varieties: Black Beauty and Florida High Bush.

PEPPER

Pepper plants are grown in cold frames only, as the field plants would be entirely too late to be of any use. The transplanted pepper plants will be ready by May 10th, and the drilled plants by May 20th, at a much lower rate. Varieties: Ruby King, Ruby Giant, World Beater, Bullnose, California Wonder and Long Red Cayenne.

Also Cheese Pepper

ASPARAGUS ROOTS

7

Our Roots Are Grown From High Grade Seed

CUR ASPARAGUS ROOTS

Asparagus beds last for a number of years, the profit during those years depend on the foundation of the bed, The whole secret is good thrifty roots from the best seed obtainable. What we have to offer is a selected strain of Martha Washington which produces larger stalks, more rust resistant and cuts a lot more colossal grass than other varieties including other Washington strains.

Thrifty RHUBARB Roots

RHUBARB

This is one of the earliest crops of the season easily grown. A bed will last for a number of years.

We have two varieties. Red Victoria and Strawberry both popular varieties with large cherry red color stalks.

we have a good supply of one, two and three year old. The 1 yr. will run from $\frac{3}{8}$ to $\frac{1}{2}$ inch at crown, the two yr. will run from $\frac{3}{4}$ to $1\frac{1}{2}$ inches at crown, the three will be two inches and up.

Horseradish Roots

One of the easiest crops to grow

Horseradish grows well in any soil. If planted in early spring it will make large roots to dig by early fall. Horseradish can be dug any time during the winter that the ground is not frozen, or left until spring and will keep increasing in size throughout the winter.

It should be planted in three foot rows about two feet apart in the row. Set roots with large end up, about two inches below the surface.

We are growing the Maliner Kern variety which is superior to all others. They are very rampant in habit of growth, outyielding all, and pure white when grated.

We have an exceptionally nice lot of roots cut seven to eight inch lengths No. 1 the heaviest will run as nice as any you can buy. The No. 2 will run about half the weight of the No. 1.

Horseradish Roots Transportation Fully Prepaid

	12	25	50	100	500	1000	5000 per, M

After November first we supply roots for grating, write for price.

Raspberries

LATHAM-Red. One of the strongest and most vigorous growers, yielding good crops of large berries, Recommended for garden or commercial planting.

CHIEF-Red. The earliest of red raspberries. It makes a vigorous growth and is exceptionally hardy. The fruit is not as large as the Latham, but very productive, of bright red firm berries, making a variety for general planting.

ST. REGIS-Red. The most popular evebearing raspberry. It bears a good crop in June, then again in Sept. and continuous until freezing. It is medium in size and has a good flavor.

CUMBERLAND-Black. The standard of black Raspberries. The fruit is large and attractive, firm and of excellent quality. Recommended for home use and distant market.

NEW LOGAN-Black. This is the choice of many growers. A strong and vigorous grower, very resistant. The fruit is large glossy black, a good shipper and one week earlier than the Cumberland.

Blackberries

9

ELDERADO—The most popular of all Blackberries. It is a strong upright grower, the fruit is large. Jet black and excellent flavor.

EARLY HARVEST—The earliest to ripen, most productive of early varieties. The canes make good strong growth. The fruit medium to large, first quality.

DEWBERRY LUCRETIA—Most popular and we believe to be the choice of Dewberries. Priced the same as Blackberry plants.
